

## Conveyor Belt Deicer & Ice Preventative

**Winter cold is the enemy. LIQUID HEAT eliminates ice before it occurs!**

Back in the day, extreme cold shut down coal mines and power plants. Then came **LIQUID HEAT**. **LIQUID HEAT** was able to keep these plants operating when they otherwise could not. At this point they were able to incorporate an effective cold weather operating strategy with **LIQUID HEAT**. This greatly improved productivity, not to mention the overall working environment by getting out of the cold.

**LIQUID HEAT** has a proven track record of preventing ice from adhering to equipment surfaces at temperatures down to -60°F and will continue to last with only one application.

### Why choose LIQUID HEAT?

- Effective on conveyor system belts, rollers, idlers, chutes, switches, truck beds & more
- Acts as a deicer and ice preventer
- Remains liquid and easy to spray in extreme cold – won't gel up
- Works in extreme low temperatures when others fail and without repeated application
- Zircon offers automated spray systems or manual sprayers to assist in application
- Non-flammable and non-hazardous
- Eliminates freeze stick carryback in semi-truck beds hauling sand, rocks, coal, etc.
- Ingredients approved by OSHA and EPA
- Approved for use by Goodyear Belting

### Testimonial

*"Guys in the yard named it 'Miracle Juice.' **LIQUID HEAT** greatly improved overall winter performance. Clearly outperforms anti-freeze that we used in past."* – Randy Jamison, Conco Western Stone, N. Aurora, IL
