

FREEZE KING

ANTIFREEZE / FREEZE SUPPRESSANT

Zircon's **Freeze King** Gly 100 (-70°F / -57°C freeze point) is a freeze control agent that modifies and weakens the crystal structure of ice so that it readily fractures. It is a freeze suppressant applied to coal, ores, or minerals to prevent freeze clumping, to allow for an easy cold weather handling and processing.

Freeze King Gly 100 freeze suppressant is made through a complex refinery process and is a by-product of bio-fuel production. The resulting product is extremely environmentally friendly and is safe to use on all surfaces. It has been developed to provide a safe and economical replacement to potassium acetate and propylene glycol.

Benefits

- The safest freeze suppressant product on the market
- Food safe and safe on all surfaces
- Biodegradable – safe for aquatic life
- Freeze Point of -70°F/-57°C

PACKAGED

BULK:

- 5 gallon pail
- 55 gallon drum
- 330 gallon tote
- tank (min. 1,500 gallons)
